Luminate Midyear Music Report

LUMINATE

Introduction

Luminate is pleased to share our **Midyear Report for 2022**, presenting the most noteworthy music industry trends and insights. We're especially excited to share this report for the first time ever under our new brand, which we revealed to the world in March. Having operated previously as MRC Data and before that Nielsen Music, we now cast our identity as Luminate, a name that reflects the innovation and energy of a new and capable perspective, steeped in experience and designed to serve the entertainment industry at the very moment virtually every question's answer depends on data.

The 2022 music story, so far, has been defined by the evolutions and continuations — both predictable and unexpected — of consumption trends that have dominated the industry's attention over the past few years.

The following report includes the latest updates on these topics, from the increase in catalog streams to continued growth of vinyl sales, from Latin music's ever-growing influence to the ways in which music is traveling and connecting across global markets, breaking down the data in a way that best reflects where the music industry stands, and where we think it is headed.

Buying And Selling Music "As It Was"

There's no denying that on-demand streaming is dominating the music marketplace right now, but the increase in vinyl sales continues to be a major story, especially with the increasing number of high impacting new releases from the industry's biggest stars. That trend reached new heights during the first half of this year, as evident by Harry Styles's

impressive record-breaking week for vinyl sales of his third studio album *Harry's House* in May, contributing to the vinyl format's slight increase in sales so far this year. **On the retailer end, Mass Merchant stores have doubled their share of the vinyl universe since 2019, from 6% up to 12% through the midyear of 2022.** While Independent stores and online retailers still dominate the market, responsible for 52% and 31% of all vinyl sales respectively, this can certainly be looked at as an indication of retailers like Target and Walmart more aggressively stocking and marketing vinyl products, especially with their own exclusive variants. It's yet another reflection of vinyl's increasing value within the consumption landscape.

"Running Up" Those Catalog Streams

While Current releases are making a significant increase in their share of vinyl sales, the overall consumption of Current' music is down 1.4% over this point last year. This trend is evident in the measurable decline in high impacting new releases overall, which are defined as an album that debuts on the Billboard 200. In Q2 of 2021, there were 126 high

impacting releases. By the end of Q2 of 2022, there were only 102.

By contrast, Catalog** consumption continues to rise, with a 19% increase over this time last year. One of the biggest cases of catalog's continued growth this year has been the massive Kate Bush resurgence thanks to the appearance of her song "Running Up That Hill (A Deal with God)" in season 4 of Netflix's hit series "Stranger Things." The song saw a 16,867% streaming increase between the season premiere on May 27, 2022 and the tracking week ending June 16, 2022, which led to it becoming the most audio streamed song, both within the U.S. and globally at the end of that week. It ranked No. 1 on the Billboard Global 200 and No. 4 on the Billboard Hot 100, for the chart week dated June 18, 2022. While songs from decades past are being discovered by younger audiences in the streaming era, it's also important to note that $\frac{1}{2}$ of Catalog streams so far in 2022 have been for songs released between 2017 and 2019.

A reaction to the rise in catalog consumption that can't be ignored is the high amounts of money investment and management firms are paying to acquire A-list legacy and contemporary artist career catalogs. This year's most notable examples include the sale of Justin Timberlake's catalog to a fund backed by private- equity firm Blackstone, Inc, Universal Music's purchase of both Sting and Neil Diamond's catalogs, and Bob Dylan's catalog sale to Sony Music.

Collaboration Generation

Another creative technique/artist marketing tool that has amped up since the start of the pandemic in 2020, and has been growing consistently overall since the streaming era of the last decade began, is artist collaborations. The number of collabs amongst the top 10,000 most streamed songs has been

gradually increasing across most genres each year, with Dance/Electronic and Latin leading the way. In fact, nearly 1 in 4 Latin songs within the top 10,000 most streamed songs across the industry this year were collaborations. Notably, Pop is the only genre that saw a decrease in collaborations released from the same time last year.

Cross-artist marketing has been utilized as an effective artist development tool for decades in the touring space. But, with live events taken away, and then scaled back, over the past two years, artists, managers and labels appear to have become more focused on using this tool in their release strategies as well.

Bad Bunny Gives Latin A Very Good Year

The genre that has had the biggest victory so far in 2022 is Latin. The genre had its highest streaming week ever in May, largely driven by the release of Bad Bunny's album *Un Verano Sin Ti*. During the tracking week ending May 12, 2022, Latin music garnered 1.82 billion weekly on-demand audio streams, which

surpassed Country for the first time, making Latin the 4th most popular genre in the U.S., behind pop, rock, and R&B/hip-hop that week. Those 1.82 billion audio streams also gave Latin a greater weekly total than any weekly total for the Country genre to date. Bad Bunny's share of all U.S. Latin Streaming consumption is 5% so far in 2022 and his album *Un Verano Sin Ti* held 16% U.S. Latin Streaming consumption share during its release week in May.

Latin and Country audio streaming growth have both been generally outpacing the larger industry over the last five years, but Latin's growth has outpaced Country's growth so far in 2022, with Latin showing a 33% increase and Country a 9% increase.

Music Is Global, But Language Matters

While many cultural and technological factors impact the way a song moves from one market to the next, our 2022 data shows a clear link between countries that share language and a bias towards local music. In order to make these complex factors visible, we have created the **Luminate Similarity Score**. The

score, introduced in this report, is a measure of streaming similarity to help identify the crossover between the popular songs in one country to other countries around the world. Our goal in using the score is to more accurately illustrate the similarity or uniqueness of music markets.

For example, our current global data for the first half of 2022 shows that Canada had the most similarity with the U.S. streaming market, followed by Australia and New Zealand with both countries respectively seeing 61.8% and 60.9% of their respective Top 10,000 songs being the same as those in the U.S. Top 10,000. Other English-speaking countries followed closely with the UK having 54%, Ireland having 53% and South Africa having 50% similarity to the U.S Top 10k. The key factor proves true with other languages during the same time frame, as the top seven countries with most similarity to Mexico's streaming market were all Spanish-speaking: Bolivia at 58%, Ecuador at 58%, Chile at 56%, Peru at 55%, Colombia at 54%, Argentina at 49%, Spain at 42%.

Conclusion

In the following pages of this report, we offer a deeper look into the trends outlined above. This year, our aim was to showcase a fuller visual representation of our midyear music data and insights, so we created a number of infographics that we hope you'll find useful. These graphics are presented alongside the Midyear Music Charts, which you'll find at the end of the report. Should you have any questions, or need further clarifications on these findings, please don't hesitate to reach out to us. We are here to help you navigate this ever-evolving music marketplace.

Current* vinyl album sales are up over this time last year

Catalog** vinyl album sales are down over this time last year

Harry Styles broke the modern-era¹ record for the most vinyl album sales in a single week with the release of his third studio album Harry's House in May

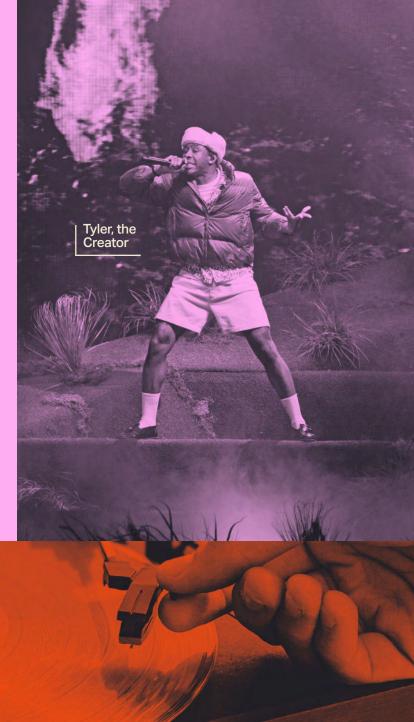

+361%

Mass Merchant stores, like Target and Walmart, have doubled their share of the vinyl album universe since before the pandemic due to a 361% increase in vinyl sales since 2019.

BTS had the biggest single week of CD sales so far in 2022 with their album Proof in June.

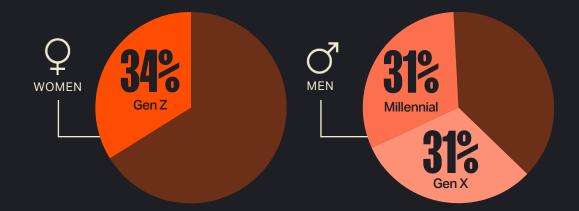

Tyler, the Creator released a vinyl version of CALL ME IF YOU GET LOST for the first time nearly 10 months after its initial release. The move resulted in 50K vinyl sales and a return to #1 on the Billboard 200 during week ending 4/21/22, indicating vinyl's increasing relevance, and newfound reach from a genre perspective.

About Luminate

Luminate is the preeminent entertainment data and insights company, unleashing access to the most essential, objective, and trustworthy information across music, film and television, with data compiled from hundreds of verified sources. Today, the company maintains its more than 30-year legacy of accurate storytelling by powering the iconic Billboard music charts, while also acting as the premiere database for the television and film industries. Working closely with record labels, artists, studios, production companies, networks, tech companies, and more, Luminate offers the most valued source of comprehensive, independent, and foundational entertainment data that drives industry forward. Operating independently, Luminate is owned through a joint venture between Penske Media Corporation and MRC.
